## SMALL EVERGREENS Suitable for Rock Garden Number of Trees Wanted

Suitable for Rock Garden	
Arbor Vitae, American	
18 to 24 in50c to	.75
Arbor Vitae, Globe Shape	
12 to 15 in35c to	.50
Arbor Vitae, Pyramid	
18 to 24 in	1.00
12 to 15 in35c to	.50
9 to 12 in25c to	.35
Juniper, Pfitzer, 15 to 18 in	.75
12 to 15 in35c to	.50
6 to 9 in	.25
Juniper, Saven, 12 to 15 in	.60
10 to 12 in35c to	.50
8 to 10 in	.20
Juniper, Prostrata, Creeping	
9 to 12 in	.25
12 to 15 in	.35
Juniper, Silver, Creeping	
8 to 12 in35c to	.50
Pine, Austrian, 12 to 18 in.	.50
10 to 12 in.	.25
6 to 9 in	.10
Pine, Mugho, Dwarf, 8 to 10 in.	.40
6 to 9 in15c to	.25
Spruce, Colorado, Blue	
12 to 15 in\$1.00 to	1.50
8 to 10 in\$ .25 to	
Green, 10 to 15 in\$ .50 to	
8 to 10 in	.20
Spruce, Black Hill	
6 to 9 in15c to	.20
Spruce, Norway, Green	
6 to 9 in10c to	.20

When planting in a rock garden, use some of the tall growing varieties for background, such as the American and Pyramid Arbor Vitae, Austrian and Scotch Pine, Norway Spruce and Canadian Hemlock.

The Junipers and Arbor Vitaes can be trimmed to prevent spreading or growing too tall.

#### PERENNIALS IN BLOOM

Don't forget to visit the nursery during the month of June when thousands of perennials are in bloom, and in July and August when many varieties of Hardy Phlox are in bloom. A good display will be on hand each day from which to select.

#### ANNUALS IN BLOOM

Many annuals are in bloom at the nursery during the summer months. If your garden is not complete, you can get Petunias, Verbenas, Bachelor's Buttons, Pinks, Marigolds, Lobelias, Snapdragons, Zinnias, etc., all in bloom, just what you need to fill up that vacant space in the garden.

The nursery is open every day all summer. The summer planting of flowers is increasing each year. The plants should be planted in late afternoon or evening for best results. Water the ground before planting and again afterwards. Press earth firmly around roots.

Perennials should be protected in winter with a covering of three or four inches of straw. Cover in the fall when the ground starts to freeze.

#### BLACK DIRT

Our black dirt is nearly all humus. Humus is decayed vegetation and decayed vegetation is nature's fertilizer. Nothing of importance will grow without it. Decayed vegetation produces a rank growth of new vegetation wherever used, in flower pots, window boxes, flower beds, gardens or lawns.

Two-yard	truck	load\$	4.00
Sack			25c

Dirt properly mixed with humus and fertilizer for use in window boxes.

Sack ......500

The Black Dirt which we have been selling for many years is a product of an old lake bottom or peat bog. The accumulation of peat is the result of dead and decayed grasses, roots and other vegetable matter. It is similar to leaf mold which has long been considered of great benefit to soil.

Peat soil at one time was considered useless for garden or farm crops, but now that tractors are being used to thoroughly pulverize the soil, wonderful crops are raised. Horticultural publications are claiming great results are obtained by the use of peat for many purposes. It is now being dried, bailed and sold by the name of Peat Moss. Much of it is shipped here from Europe. Some people are still condemning and advising their friends against the use of peat soil. Some claim it will burn, or dry up and blow away. Leaf mold will also burn, or dry up and blow away. Horticulturists claim that peat will hold from 10 to 15 times its weight in moisture. Some people claim plants grown in peat soil are small and stunted, while other complain that they grow too big. Like the first locomotive engine they said it would never run, but if it ever did get started, they would never be able to stop it.

Many of our customers who have been using this soil for a number of years have reported wonderful results by mixing it with other soil in their gardens; while those who just spread it on the top of the ground are not so successful. It is too light unless mixed with other soil. For window boxes use one-third peat mixed with other soil. For lawns, first mow the grass, then spread soil on about one inch thick and rake thoroughly. The grass roots soon take up the soil. If the lawn is poor, this can be done at intervals through spring, summer or fall. For using in rock gardens and terraces it prevents the soil from washing. For mixing with clay it softens the soil and prevents it from caking. It retains the moisture when used in sandy or gravelly soil.

#### LAWN GRASS SEED

A good mixture of Clover, Redtop and Kentucky Bluegrass.

Pounds Wanted

Grade	No.	1Lb.	40c
		2Lb.	
		verLb.	

One pound will plant a square space of about 15 feet wide, or 225 square feet.

#### **FERTILIZER**

Steamed Bone Meal	, 3 lbs20c
10 lbs50c	20 lbs90c
Wizard Sheep Manu	re, 3 lbs20c
10 lbs50c	25 lbs\$1.00
Vigoro, 12-oz. pkg	10c
5-lb. pkg50c	10-lb. pkg85c
25-lb. bag\$1.50	50-lb. bag2.50
100-lb. bag	4.00

Vigoro is a highly concentrated fertilizer. It acts quickly and should be used in starting small plants. Spread on a coating of about 1 lb. to 3 or 4 square yards, and mix in the soil to a depth of 3 or 4 inches before setting in plants. Use it in connection with our Humus soil to start a more rapid growth.

## PLANTS SHIPPED BY PARCEL POST

We do not fill mail orders for less than \$1.00. Add 25c extra for postage and packing on \$1.00 order and 10c extra for each additional \$1.00.

This	sheet	will	be	returned	with	your
order.					_	-

Addres	SS	 

This is a view in one of the rock gardens at the nursery. It was taken in September, 1932, a few weeks after the garden was completed. There are about one hundred feet of irregular shore line around this pool. The garden can be viewed from any direction as a path leads entirely around the pool. This pool is fed by a winding stream flowing over waterfalls and through mossy banks from the pool of a smaller garden at a much higher elevation.

If you must have a hobby, try your hand at rock gardening. There is always something in nature that appeals to everyone. A rock garden built to represent nature is most fascinating. There is something in a well-built rock garden to interest everyone, the plants and flowers, the rocks, the water, water plants and fish, or the effect of the entire arrangement of the pool and the garden. Hills and valleys, streams and waterfalls representing in miniature what we have seen in nature make a grand display.

One might travel for days, and not find a spot so interesting as a carefully built rock garden on his own home grounds.

A rock garden should be something besides just a load of rock dumped on the ground with a little dirt thrown in between the rocks and a few plants added. To be fascinating a rock garden should represent something in nature. Who would care to see meadows and prairies covered with rock? But if we visit the mountains or steep banks of rivers or

lakes and fail to find ledges of rocks and boulders of all kinds, we would be disappointed.

It is on the mountain slopes and cliffs where we find the Alpine or rock plants growing, so let us make some mountains and valleys in miniature. If you wish a pool make it irregular to represent a lake with an island or peninsula, etc. Select a spot near the side or back of the lot line. Use some shrubs or evergreens for a background. Dig the pool about 18 to 24 inches deep, and cement the bottom and sides 4 to 5 inches thick. Use the dirt to shape the mountains and valleys around the pool. Leave enough open space in front for entrance to pool.

If the dirt is clay, add some sand or gravel to it, then mix in about 3 or 4 inches of our humus or peat soil. It supplies fertility and prevents the soil from washing. Dig pockets here and there and set your rock. Some prefer imported rock, but native rock is all right. Use the flat rock for cliff effect, boulders and odd shaped rocks on the slopes and foot hills. Then tamp the soil down between the rocks and set in the plants. Use some of the taller varieties near the pool.

Before starting your rock garden practice on a few tiny ones for models to get the shape you want. It will save time and produce some interesting results.
